

93/197 Horses from HK, JP, KR, MO, MY, SG, TH, equidae from CA and US

Part II: Certification

<p>II. Health information</p> <p>I. Health information</p> <p>I, the undersigned, certify that the animal(s) described above meets the following requirements:</p> <p>(a) it/they come(s) from a country where the following diseases are compulsorily notifiable; African horse sickness, dourine, glanders, equine encephalomyelitis (of all types including VEE), infectious anaemia, vesicular stomatitis, rabies, anthrax;</p> <p>(b) it/they has/have been examined today and show(s) no clinical sign of disease (2);</p> <p>(c) it/they is/are not intended for slaughter under a national programme of infectious or contagious disease eradication;</p> <p>(d) during the last three months immediately preceding the exportation (or since birth if less than three months old) it/they has/have been resident on holdings under veterinary supervision in the country of dispatch and</p> <p style="margin-left: 20px;">- either it/they come(s) from a country (1) listed in group A, B, C or D below (6.) and has/have been isolated from equidae not of the same health status during 30 days prior to dispatch, (3) or</p> <p style="margin-left: 20px;">- it/they come(s) from a country (1) listed in Group E below (6.) and has/have been in an approved isolation centre, protected from vector insects during 40 days prior to dispatch; (3)</p> <p>(e) it/they come(s) from the territory or in cases of official regionalization according to Community legislation from a part of the territory of a third country in which:</p> <p style="margin-left: 20px;">(i) Venezuelan equine encephalomyelitis has not occurred during the last two years;</p> <p style="margin-left: 20px;">(ii) dourine has not occurred during the last six months;</p> <p style="margin-left: 20px;">(iii) glanders has not occurred during the last six months;</p> <p style="margin-left: 20px;">(iv) either vesicular stomatitis has not occurred during the last six months; (3) or</p> <p style="margin-left: 20px;">(v) it/they was/were tested on a sample of blood taken within 10 days of export on (6.), by a virus neutralization test for vesicular stomatitis with negative result(s) at a dilution of 1 in 12; (3)</p> <p style="margin-left: 20px;">(v) in the case, the above described consignment of equidae includes uncastrated male animals older than 180 days,</p> <p style="margin-left: 40px;">- either equine viral arteritis has not been officially recorded during the last six months (3) or</p> <p style="margin-left: 40px;">- the uncastrated mal animals were tested on blood samples taken within 21 days of export on (4) by virus neutralization test for equine viral arteritis with negative result at dilution of 1 in 4 in each case (3) or</p> <p style="margin-left: 40px;">- aliquots of their entire semen taken within 21 days of export on (4) were tested by virus isolation test for equine viral arteritis with negative result in each case (3) or</p> <p style="margin-left: 40px;">- the uncastrated male animals were vaccinated on (4) against equine viral arteritis under official veterinary supervision with a vaccine approved by the competent authority, according to the following programme for initial vaccination and have been re-vaccinated at regular intervals</p> <p style="margin-left: 20px;">Programmes for initial vaccination against equine viral arteritis:</p> <p style="margin-left: 20px;">Instruction: Cross out vaccination programmes that do not apply to the animal described above.</p> <p style="margin-left: 20px;">Verify supporting certification on testing before vaccination, vaccination and re-vaccination. Specify, where appropriate, the individual vaccination programme for identified animals.</p> <p style="margin-left: 40px;">(a) Vaccination was carried out on the day a blood sample was taken that subsequently proved negative in a virus neutralization test at a dilution of 1 in 4 or</p> <p style="margin-left: 40px;">(b) Vaccination was carried out during a period of isolation of not more than 15 days under official veterinary supervision, commencing on the day a blood sample was taken that was tested during that time with negative result in a virus neutralization test at a dilution of 1 in 4. or</p> <p style="margin-left: 40px;">(c) Vaccination was carried out when the animal was at an age of 180 to 270 days, during a period of isolation under official veterinary supervision. During the isolation period two blood samples taken at least 10 days apart proved a stable or declining antibody titre in a virus neutralization test for equine viral arteritis; (3)</p> <p>(f) it/they do(es) not come from the territory or from a part of the territory of a third country considered, in accordance with Community legislation, as infected with African horse sickness and</p> <p style="margin-left: 20px;">- either it/they was/were not vaccinated against African horse sickness (3) or</p> <p style="margin-left: 20px;">- it/they was/were vaccinated against African horse sickness on (4); (3)</p> <p>(g) it/they do(es) not come from a holding which was subject to prohibition for animal health reasons nor had contact with equidae from a holding which was subject to prohibition for animal health reasons:</p> <p style="margin-left: 20px;">(i) during six months in the case of equine encephalomyelitis, beginning on the date on which the equidae suffering from the disease are slaughtered;</p> <p style="margin-left: 20px;">(ii) in the case of infectious anaemia, until the date on which, the infected animals having been slaughtered, the remaining animals have shown a negative reaction to two Coggins tests carried out three months apart;</p> <p style="margin-left: 20px;">(iii) during six months in the case of vesicular stomatitis;</p> <p style="margin-left: 20px;">(iv) during one month from the last recorded case, in the case of rabies;</p> <p style="margin-left: 20px;">(v) during 15 days from the last recorded case, in the case of anthrax.</p> <p>If all the animals of species susceptible to the disease located on the holding have been slaughtered and the premises disinfected, the period of prohibition shall be 30 days, beginning on the day on which the animals were destroyed and the premises disinfected, except in the case of anthrax, where the period of prohibition is 15 days;</p> <p>(h) it shows no clinical signs of contagious equine metritis (CEM) and it does not come from a holding where there has been any suspicion of CEM during the past two months nor had contact indirectly or directly through coitus with equidae infected or suspected in CEM;</p> <p>(i) to the best of my knowledge, it has not been in contact with equidae suffering from an infectious or contagious disease in the 15 days prior to this declaration;</p> <p>(j) it was subjected to the following test carried out with negative result on a sample of blood taken within 21 days of export on (4):</p> <p style="margin-left: 20px;">- a Coggins test for infectious anaemia;</p> <p>(k) either it was not vaccinated against Venezuelan equine encephalomyelitis (3) or it was vaccinated on (4), this being at least six months prior to pre-export isolation; (3)</p> <p>(l) either it was vaccinated against western and eastern equine encephalomyelitis with inactivated vaccine on (4) (5) (3) or Japanese B-encephalitis on (4) (5) (3) this being within six months and at least 30 days of export, (3) or it was subjected to haemagglutination inhibition tests to western and eastern equine encephalomyelitis on two occasions, carried out on samples of blood taken with an interval of 21 days on (4) and on (4), the second of which must have taken within 10 days of export either with negative reactions, if it has not been vaccinated (3) or without increase in antibody count, if it has been vaccinated more than six months ago. (3) (3)</p> <p>(m) If the equidae comes from Thailand, it was subjected to a complement fixation test for glanders on (4) and for dourine on (4), this within 21 days of export with negative results at 1 in 10. (4)</p> <p>(n) it was not vaccinated against West Nile Virus (3) or</p> <p>(n) It was vaccinated against West Nile Virus with an inactivated vaccine on at least two occasions at an interval of between 21 to 42 days, the last vaccination being carried out not later than 30 days prior to dispatch on (4) (3)</p> <p>2. The animal(s) will be sent in a vehicle cleansed and disinfected in advance with a disinfectant officially recognized in the country of dispatch and designed in a way droppings, litter or fodder cannot escape during transportation.</p> <p>The following declaration signed by the owner or representative is part of the certificate.</p>	<p>II.a. Certificat reference number</p>	<p>II.b. TRACES reference number</p>

from CA and US**

Part II: Certification	II. Health information	II.a. Certificat reference number	II.b. TRACES reference number		
	<p>3.The certificate is valid for 10 days. In the case of transport by ship the time is prolonged by the time of the voyage.</p> <p>4.DECLARATION</p> <p>The undersigned (insert name) owner or representative (4) of the animal(s) described above, declares that:</p> <p>4.1. the animal(s) will be sent directly from the premises of dispatch to the premises of destination without coming into contact with other equidae not accompanied by an equivalent certificate; The transportation will be effected in such a way that health and wellbeing of the animal(s) can be protected effectively;</p> <p>4.2. the animal(s) has/have either remained in (exporting country) since birth or entered the exporting country at least 90 days prior to this declaration. (6.)</p>				
<p>(1) Part of territory in accordance with Article 13 (2) of Council Directive 90/426/EEC.</p> <p>(2) The certificate must be issued on the day of loading of the animal(s) for dispatch to the Member State of destination. It must accompany the consignment and covers only animals transported in the same railway wagon, lorry, aircraft or ship and taken directly to the slaughterhouse.</p> <p>(3) Delete as appropriate.</p> <p>(4) Insert date. In the case of a registered equine animal, tests carries out, their results and vaccination have to be entered in the identification document (passport).</p> <p>(5) WEE and EEE vaccination or testing requirements apply only to Canada and the United States of America; Japanese B-encephalitis vaccination applies to Hong Kong, Japan, Republic of Korea, Macau, Malaysia (Peninsula), Singapore, Thailand</p>
